

Title: The 5-Steps to Managing a Successful Stormwater Planned Maintenance Program

Panelist: Anna Griggs

Organizers: Andrew Demers

Cost: FREE

PDH: 1-PDH

Stormwater Permit Focus: Multi-Sector/Industrial

Audience:

- Agency Regulators and Staff
- Professional Engineers
- Municipal Stormwater Managers
- Industrial Facility Managers
- Retail Property Owners
- Multisite Property Operators

This presentation will cover the 5-Steps to Implementing a successful stormwater planned maintenance program at multiple sites across a wide range of regulatory compliance areas.

The information provided will help the attendee understand the concepts and steps behind building a successful planned maintenance program for multiple sites.

The 5-Steps include:

1. Awareness – Regulatory and Public Response
2. Identify – Types of Systems
3. Inventory – Stormwater Assets and Structures
4. Assess – Condition of Systems
5. Implement – Planned Maintenance Program

Learning Objectives:

- List the Three (3) categories of stormwater systems commonly found on a commercial property.
- Communicate the importance of implementing a stormwater planned maintenance program.
- Articulate how the use of technology aids in the successful implementation and management of a stormwater planned maintenance program.

Outline:

1. Introductions
 - a. Andrew Demers and StormwaterONE
 - b. Anna Griggs and Apex Companies
 - c. Topics to be covered
2. Identifying the various types of stormwater system
3. Stormwater asset cataloging,
4. How to determine the regular inspection and maintenance needs,
5. Projecting costs
6. Managing program data
