

C-Series / C-RM Series

Click the appropriate link below for the major component of the liftgate for which you are trying to find the correct part. If you are unsure of the name of the part in Waltco terminology, click the "Liftgate Terminology" link and it will take you to a document showing a picture of the liftgate with the common Waltco names for each of the parts.

1. LIFTGATE TERMINOLOGY

1. Hydraulic Cylinder
2. Hose Assembly
3. Return Line Barbed Fitting
4. Return Line
5. Breather
6. Dump Solenoid
7. Pump Unit Starter Solenoid
8. Pump Unit Motor
9. Thermalpak® with Voltage Guard™
10. Pump Unit Reservoir
11. Fluid Level Sight Glass
12. Hose fitting
13. Bed extension
14. Safety Hook
15. Transit Latch Handle
16. Pump Unit Cover
17. Dock Bumper
18. Mount Tube Assembly
19. Parallel Arm
20. Lift Arm Assembly
21. Platform Deck Assembly
22. Platform Extension Assembly
23. Parting Bar
24. Specification Tag
25. Drain Plug
26. Flow Control Valve

C-SERIES PLATFORM ASSEMBLY

Common Features

- Narrow arm design
- Capacity decal
- Platforms are 72" or 84" wide
- Platform depths as indicated below
- Single spring and hinge
- Reduced Maintenance Design (No grease required) (Released 8-97)
- Reduced Installation Design (No grease required. Pump attached to Mount Tube with reservoir inserted into end of Mount Tube) (Released 1-00)
- Reduced Installation Design (No grease required. Pump attached to Mount Tube with reservoir outside of Mount Tube) (Released 5-02)

Capacity decal	1600 or 2000 Pounds

C & C RM-SERIES PUMPS & CYLINDER Parts Drawings

If unsure of the correct pump or cylinder part number, [click here](#).

QUICK TIP:

Most pumps have a pump pressure decal on them that also includes the pump part number. This number will always be an 8-digit part number. If still unsure, please contact Waltco for assistance.

WALTCO TECH TIPS

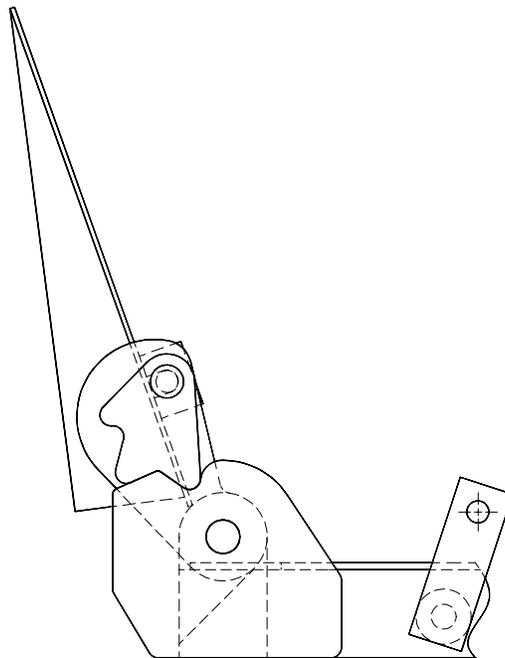

Date: 9-5-96
No. TT960004
Model: F, FSL, SL
EO No. 2222

Effective 2-19-96, all two piece platforms with 12" folding ramps will have the 90 degree ramp lock installed as standard equipment.

Since the release of this ramp we have had some field problems with the ramp clearing the lift arm when the platform is folded for transit. Most of these problems are a result of the lift arms being bent inward during the welding of the lift arm tube.

We have found that when the arms are forced back to their intended position that the platform will fold properly.

Effective 10-4-96, we will be shipping the new version of the ramp lock which will avoid these potential problems. The new ramp lock will be flush to the side of the extension and will no longer pose an clearance problem. (shown below)

EO No. 3700

CORRECTING MOTOR GROUNDING PROBLEMS ON “REDUCED INSTALLATION” FLIPAWAYS

Some of the earliest production of the Reduced Installation Flipaway liftgates may experience a “no run” situation upon initial installation. (Thermalpak™ units may also indicate low voltage with no apparent cause). This may apply to any of these gates shipped before February 4, 2000. The problem is caused by the insulating effect of paint on the small plate by which the hydraulic pump unit is mounted to the liftgate. The power units on all gates shipped starting 2-4-2000 have been reworked to eliminate this situation.

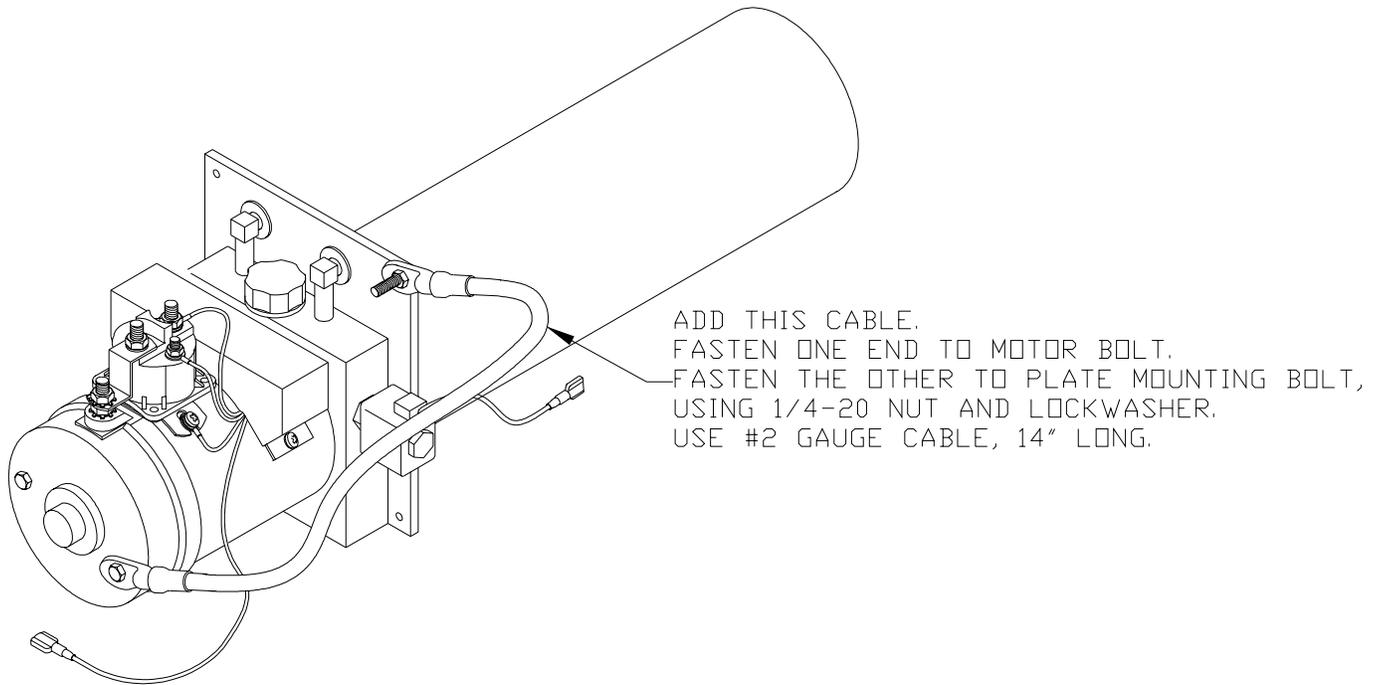

Should you experience this problem, there are two methods which may be used to cure it, as follows:

1. Remove the hydraulic and return hoses at the pump end.
Remove the four screws that fasten the pump unit to the liftgate and remove the assembly from its bracket. Then, looking from the reservoir end:

Remount pump unit and check for proper operation.

2. Alternatively, a grounding cable or strap may be added as shown below:

NOTICE:

Be sure to remove only the bolt on the **RIGHT HAND** side of the motor cap, as shown, when attaching ground cable. Otherwise, motor will have to be completely removed and reassembled.

Installation
EO No. 3700

FAST Filling of Hydraulic Reservoirs

Fill the hydraulic pump reservoir in **30 SECONDS** or less.

Here's a simple way to speed up filling of the hydraulic reservoirs on the C and E series Reduced Installation liftgates:

Find a rubber grommet that fits snugly to your pouring spout or hose, and has an OD of at least 1". When used in filling the reservoir, the grommet prevents backup and spillage of the oil. So, the oil flows into the reservoir and nowhere else. This is not only much faster, but cleaner also.

For the common "Swingspout" oil can, an excellent fit is obtained with a ½" knockout grommet (Jandorf P/N 90736 or equivalent) available at many hardware stores. Ask your Waltco representative for a sample to try.

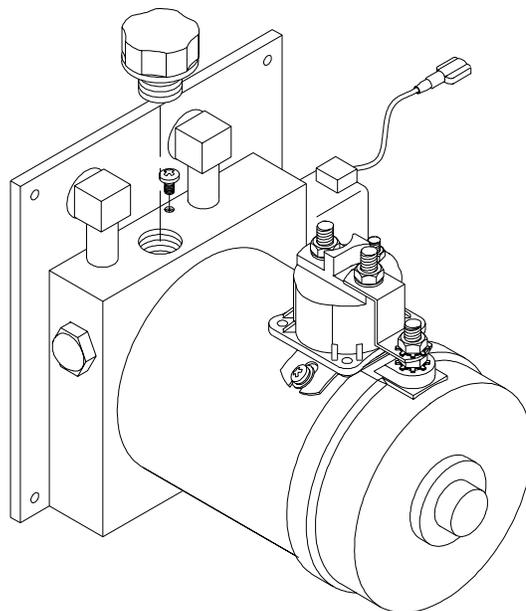

Once you've installed the grommet on your nozzle, the filling procedure is as follows:

1. Remove the Breather Cap
2. Remove the Vent Screw
3. Insert grommeted nozzle, pull the trigger and let it flow.

1. Remove Breather Cap

2. Remove Vent Screw

3. Insert grommeted nozzle, and pull trigger.

WALTCO TECH TIPS

Date: 12-8-2000
No. TT000053
Model: C-15

Elimination of C-15 Lift Arms

The C-15 model liftgates will now use C-20 lift arms in place of C-15 arms.

This change will happen on, or about, 12/15/00 under E.O. 4104.

Only difference of arm assemblies is the thickness of the arms:

C-15 arms 3/4" thick

C-20 arms 7/8" thick

No other parts of liftgates are changed.

For service:

- Use 22230020 arm assembly in place of 22130010
- C-15 Replacement Bearing Kit 80000729 has changed to also include bearings needed for the new C-20 (22230020) arms.
- PM-517 has been up-dated for above changes.

This change has been done to consolidate parts.

WALTCO TECH TIPS

Date: 2-16-01
No. TT000061
Model: F, C, E
EO No. 4350

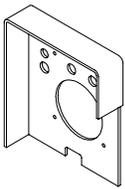

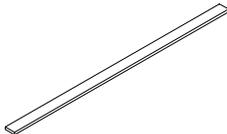

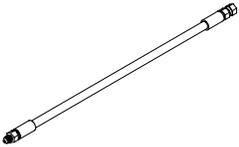

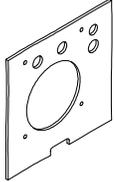

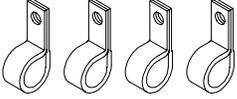

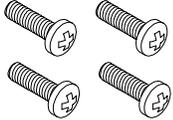

New Remote Pump Mounting Kit

A new kit has been released that will allow the pumps used on the F, C, and E to be mounted remotely from the liftgate.

It will soon be available as a standard option for the F, C, and E series liftgates. As for other models, this kit will need to be ordered as a special, along with one of the new style pump units that are compatible with it.

Included in the kit is a mounting bracket that can be installed either on the chassis frame or to the body cross members.

Contents:

(1) Mounting Bracket 	(1) 1/4" x 1" x 22" Flat Bar Brace 	(1) 20" Hose Extension (2 for Power Down) 	(1) Square Plug for pump reservoir 	(1) Gasket 
(1) 60" PVC Return Line (0 for Power Down) 	(4) Hose Clamps 	(4) Self-tapping screws 	Instructions 	

With the hose extensions included in the kit, the pump can be mounted to about 5ft. from the liftgate. However, this kit can be customized by our SP department to include longer hoses for greater distances.

This kit can be beneficial for different situations, such as:

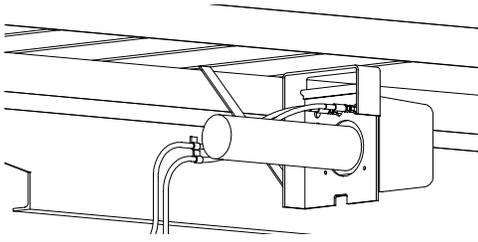

- Installing a C-series liftgate on a truck with a low bed height. The pump can be mounted well above the ground.
- When the liftgate is very close to the rear tires. The pump can be mounted out of the way of kicked-up debris or wind-blown mud flaps.

80000904 = Kit for Gravity Down **80000905** = Kit for Power Down

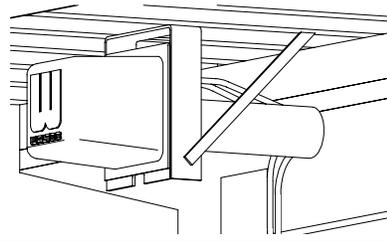

See attached installation Instructions for Kit.

1. Locate a position for the pump on the truck frame as near to the rear of the vehicle as practical. Shown below are three possible ways the pump may be mounted.

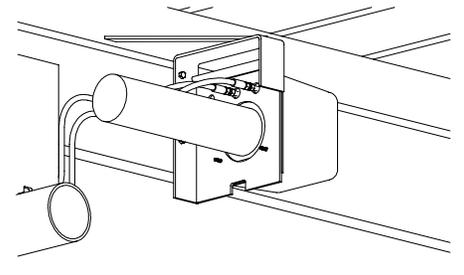

Mounted on crossmembers parallel to the vehicle frame

Mounted on crossmembers perpendicular to the vehicle frame

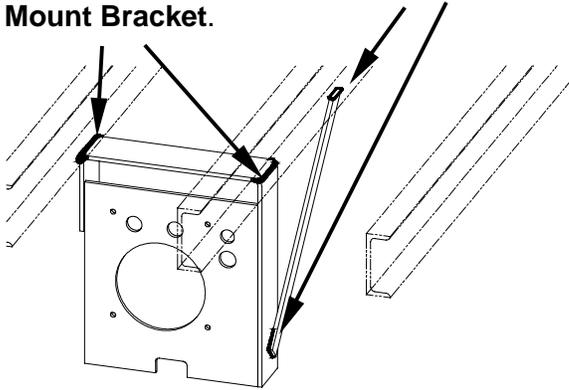

Bolted or welded to the vehicle frame

2. Install Remote Bracket on to the vehicle.

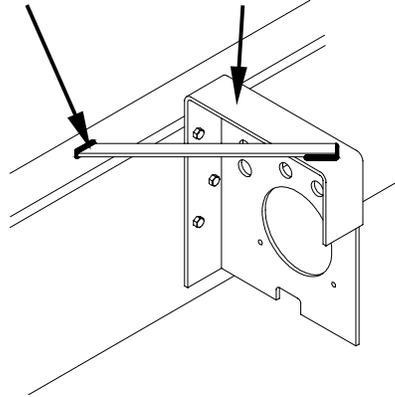

If welding to crossmembers

Weld top ends of Mount Bracket to a crossmember.
Weld both sides of one end of Brace to a crossmember.
Weld (3) sides of other end of **Brace** to the **Mount Bracket**.

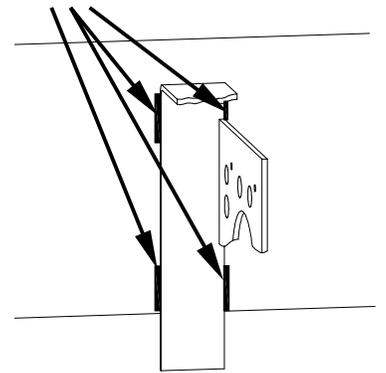

If bolting Mount Bracket to vehicle frame

Weld both sides of one end of Brace to the body long member.
Weld (3) sides of other end of **Brace** to the **Mount Bracket**.

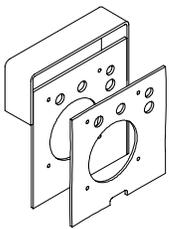

If welding Mount Bracket to vehicle frame

Weld the Mount Bracket as shown

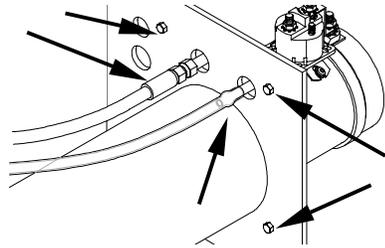

Also weld Brace as shown in previous picture.

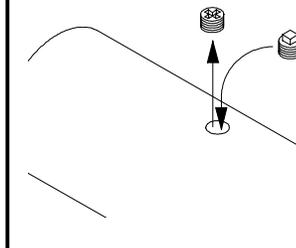

3. Add Gasket to Mount Bracket.

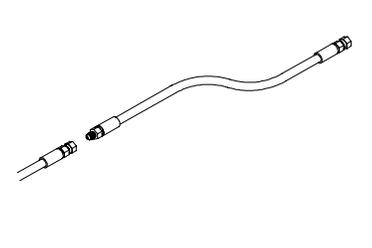

4. Detach hoses and unfasten (4) hex-screws to remove pump.

5. Replace vented plug with Square Head Plug

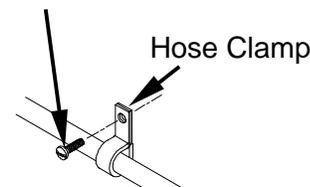

6. Connect Hose Extension to Hydraulic Hose.

7. Fasten Pump to Mount Bracket using the (4) hex screws.
8. Re-attach hoses.
9. Secure hoses to the vehicle using the hose clamps and self-tapping screws provided.

Self-tapping Screw

IMPORTANT:
Hydraulic hoses are to be protected from sharp edges, and never secured near exhaust system.

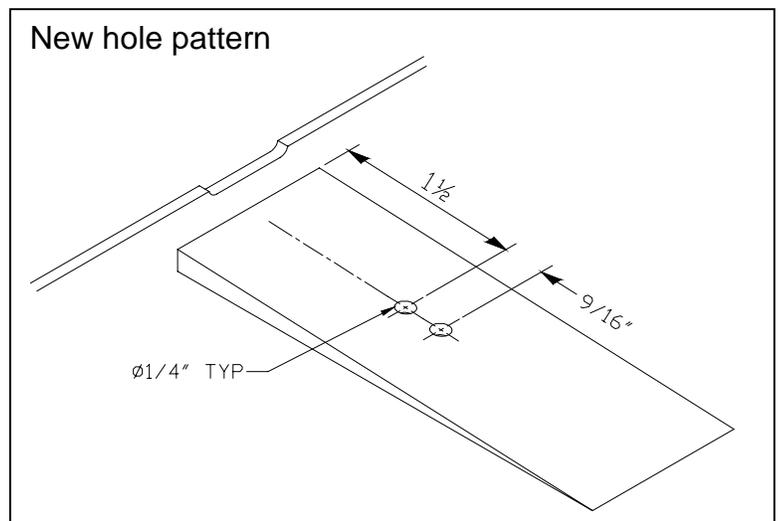

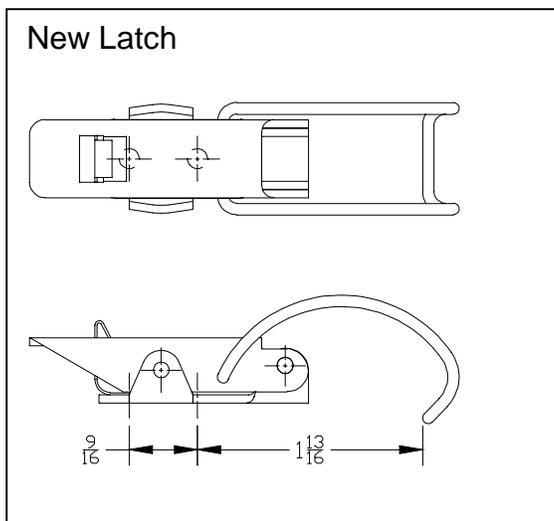

WALTCO TECH TIPS

No. TT010071
Model: F, C, E
EO No. 4332

The latch on the pump cover for a reduced installation pump has been replaced with a new latch. As a result of the new latch having a different mounting hole pattern, new holes will need to be made in the cover when replacing an old-style latch.

A new latch replacement kit (80000764) has been released. It includes instructions for locating and drilling fastener holes for the new style latch in case the latch being replaced in the field is the old style.

WALTCO TECH TIPS

Date: 10-24-01
No. TT010072A
Model: F, C, E
EO No. 4556

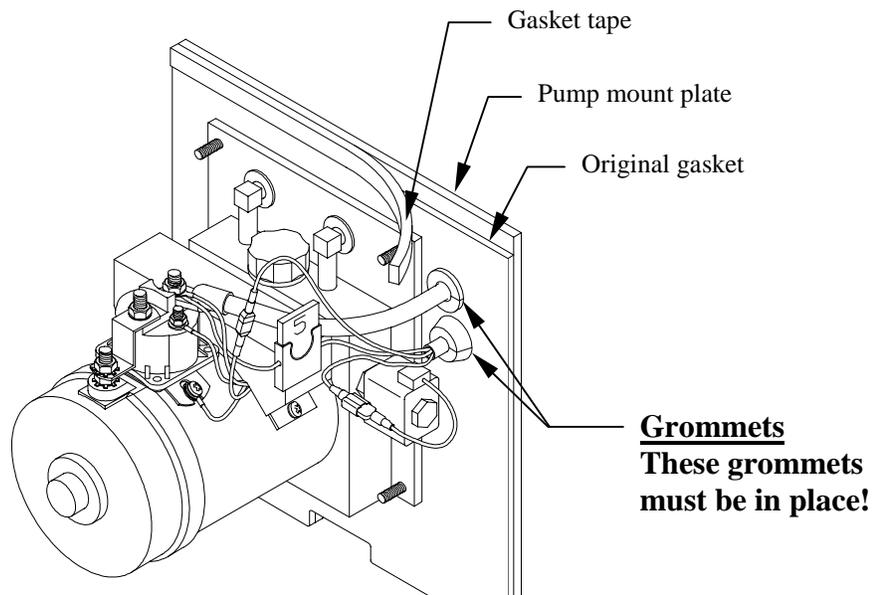

The seal around the pump cover on the Reduced Installation liftgates can be improved with the use of a new kit (80000745).

Gasket tape from the kit is added to the existing gasket on the liftgate. This is to ensure that the entire opening of the hood is gasketed.

Also in the kit are grommets that should be used to seal around the battery cable and control cord.

For further details, see the Auxiliary Gasket Installation Instructions (80101302).

Note: The gasket has been lengthened, new units will not require the gasket tape.

EO No.

Flow Control Adjustment for Gravity Down Flipaway Liftgates

With some pumps, slower lowering speeds may be desired beyond the full adjustment of the Flow Control Valve. Here's a simple way to create more adjustment when needed:

1. Locate the flow control valve on the side of the pump body.
2. Loosen the 7/16" locknut under the thumb wheel.
3. Turn the thumb wheel counter-clockwise, to back it out at least 3 turns from bottom.
4. Turn the 1/2" hex at the base of the valve in (clockwise only). Go no more than 1/2 turn at a time. In most cases, 1/4 to 1/2 turn will be sufficient.
5. Operate liftgate, adjusting thumb wheel to get the desired speed.
6. Tighten 7/16" locknut.

IMPORTANT: TURN VALVE BASE NUT CLOCKWISE ONLY: Turning counter-clockwise may cause leakage around the threads, requiring removal and resealing of the valve. Thumb wheel may be turned in either direction as needed when adjusting lowering speed.

WALTCO TECH TIPS

Date: 5-20-02

EO No. 4665

IMPROVED GROUND CLEARANCE AND PUMP COVER LATCHING

Improvements have been made to the C-RM Series model in response to the concern of pump covers getting knocked off and lost. Various reasons were identified as to the cause of this problem. The primary cause being, the pump cover was too close to the ground – if the truck went over a curb, the pump cover could easily be knocked off. With the improvements made to address this issue came other benefits. However, some concerns were produced as well.

Benefits:

- **Gained 3” More of Ground Clearance**
This was accomplished by moving the pump out of the mount tube and relocating it on the forward side of the mount tube. The pump mount plate, which the pump and cover attaches to, is no longer the lowest point on the liftgate. This also helps out the vehicle departure angle.
- **New Rubber Draw Latch Replaces Metal Latch**
The new rubber latch will not pop open like the metal latch did. Also, it can better withstand impact.
- **Two studs have been welded onto the pump mount plate**
These fit snugly into the two lower corners of the cover. These help keep the cover from being shaken off.
- **No Need of Safety Pin**
The safety pin was used to help keep the metal latch from popping open. It was very difficult to fasten this to the latch.
- **Pump Can Be Filled Much Faster Now That Reservoir Is Out of Mount Tube**
Since the reservoir was in the mount tube, it had to be filled indirectly through the breather port on the pump manifold. It could take up to 2½ minutes to fill unless a certain grommet was used. Now hydraulic fluid can be poured directly into the reservoir and filling it takes about 30 seconds.
- **Holes in the pump plate for the battery cable and control cord have been lowered to near the bottom of the cover**
In case the grommets for the battery cable and control cord are not installed, water that gets in through these holes can get back out.

Concerns:

- **Requires 5” More Mount Frame Clearance**
There will be more situations where the liftgate will not fit on the truck because there will be interference with the pump. These situations will require the remote pump mount kit – the installer will have to take the pump off of the liftgate and mount it on the remote bracket.

WALTCO TECH TIPS

Date: 09-27-02
No. TT020102 rev 02
Model: C, E, F

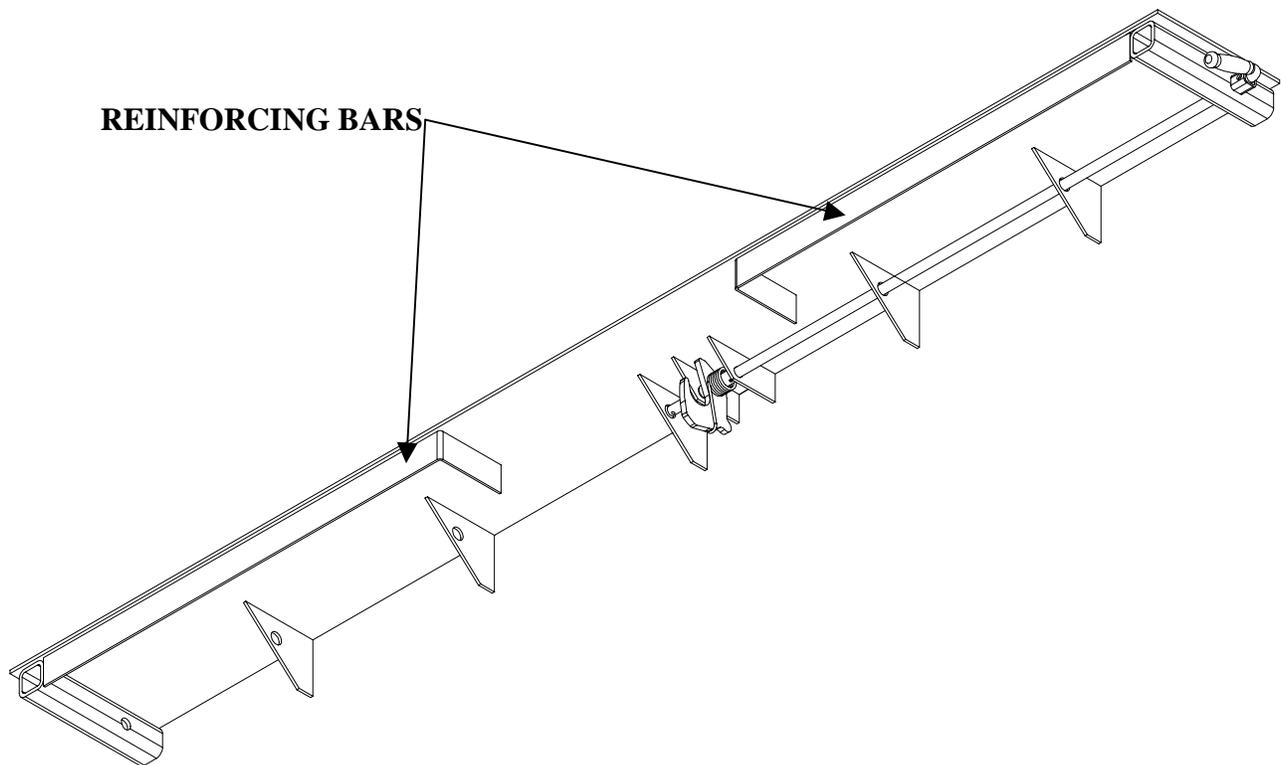

An SP has been created to increase the strength of the bed extensions on all Cs, Es and Fs.

This SP incorporates a new location for the latch hook on the bed extensions and a new bail location on the platforms for the E-25 series. This was done to allow every E-series gate to be compatible with a walk ramp. All the customer needs to do is cut notches in the E series SP bed extension to accept the ramp.

The special F bed extension can only be used with a special platform that fits around the reinforcement bar.

For C or E series gates order SP #0245

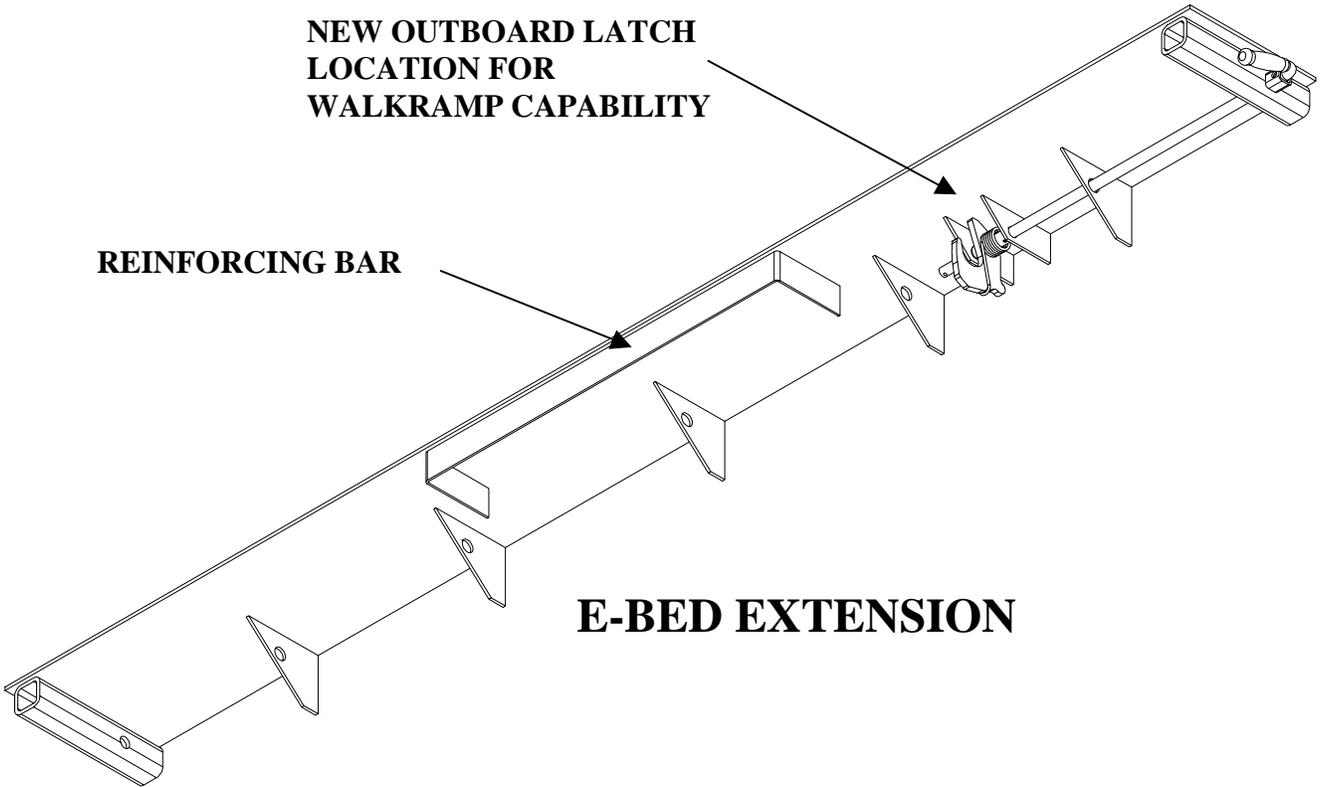

For F series gates order SP#0252

EO No. 4926

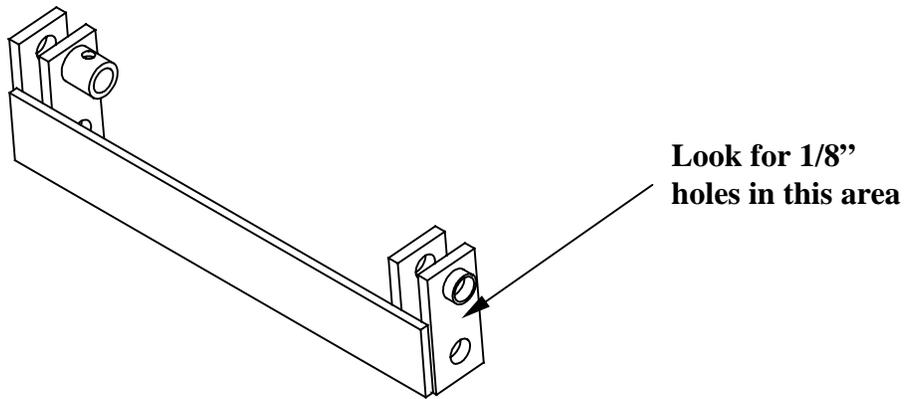

Subject: Identification of C-Series Hinges

Due to the difficulty of stamping legible letter designators on the C hinge assemblies, Waltco is adding holes to distinguish the different assemblies.

Previously letters were used:

- H = Half dip
- F = Full dip
- L = Level ride

A number of 1/8" diameter holes in the hinge bars, or the lack of holes will now identify the hinge assemblies.

Half Dip (no holes)	Full Dip (one hole)	Level Ride (two holes)

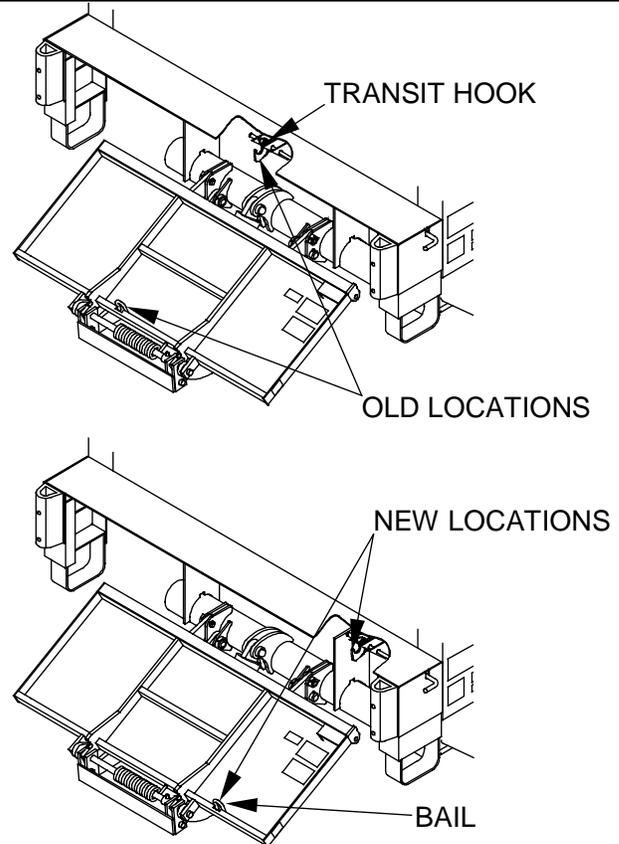

WALTCO TECH TIPS

No. TT030130
Model: F, C, and E Series
EO No. 5038

Bed Extension Consolidation

Waltco has consolidated Bed Extensions used on it's F, C, and E Series liftgates.

- Effective mid July, these gates will use the new design Bed Extension.
- This new Extension design is currently used on all E-30 liftgates.
- The new Extension has the Transit Hook shifted from the center to the curbside. The Platform Bail is also shifted to align with the Hook.
- Bed Extensions come in two (2) widths, one for 96" wide bodies, and one for 102" wide bodies.

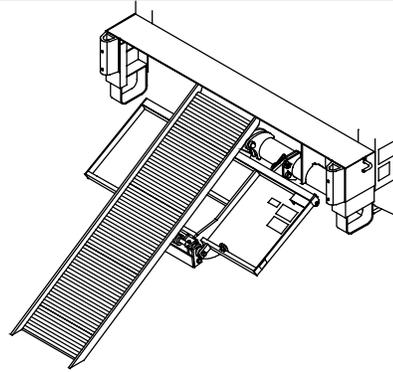

GR00374

Advantages:

- Reduced inventory
 - One Bed Extension for all F, C, and E liftgates.
- All C and E liftgates now compatible with walk-ramps.

Walk Ramp Compatible

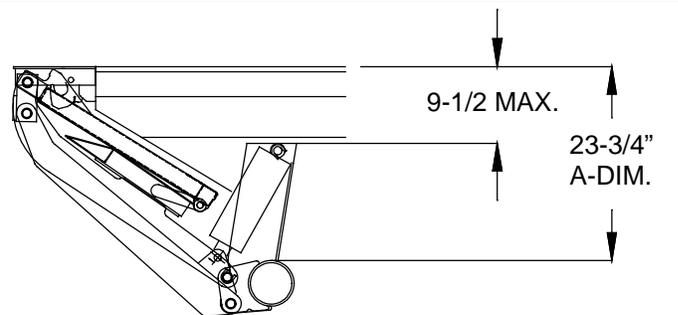

- C and E liftgates will now be compatible with walk-ramps.
- Use optional Walk-Ramp Installation Kit (part number 80000432).

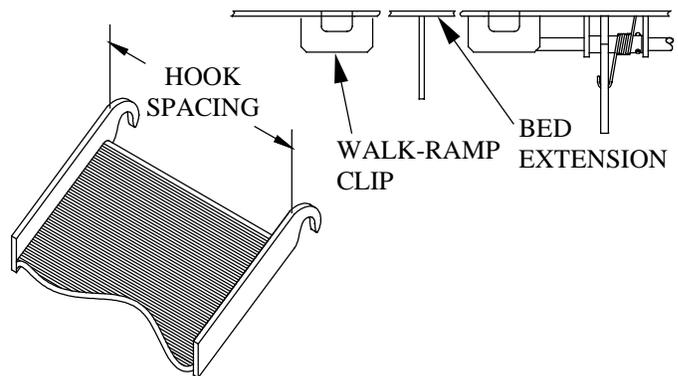

GR00375

Walk-Ramp Restrictions

- E-Series Liftgates have a maximum clearance for walk-ramp of 9-1/2". This is from top of floor to top of Cylinder Tower with maximum A-Dimension of 23-3/4".
- F-Series Liftgates are not compatible with walk-ramps. Walk-ramp clips would interfere with F-style Platforms when the Platform is open at bed level.
- C-Series Liftgates can only be used with walk-ramp hook spacings of 26" or greater.
- Can not be used with 21-3/4" hook spacing. C-Series Liftarms are too wide to fit between the ramp hook clips.

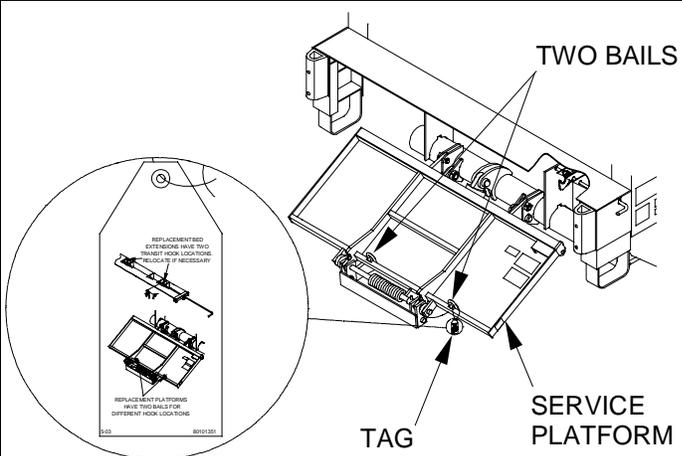

GR00376

GR00377

SERVICED PLATFORMS

- All Current F, C, and E Platform part numbers will be changed to service status.
- All serviced Platforms will receive a second Bail to make them compatible with both the old and new styles.
- Replacement Bed Extensions will have two available locations for the Transit hook also for old and new style compatibility
- Replacement Platforms and Bed Extensions will receive a tag explaining these changes

EO No. 5038

F, C, and E Deck Extension Consolidation

PURPOSE

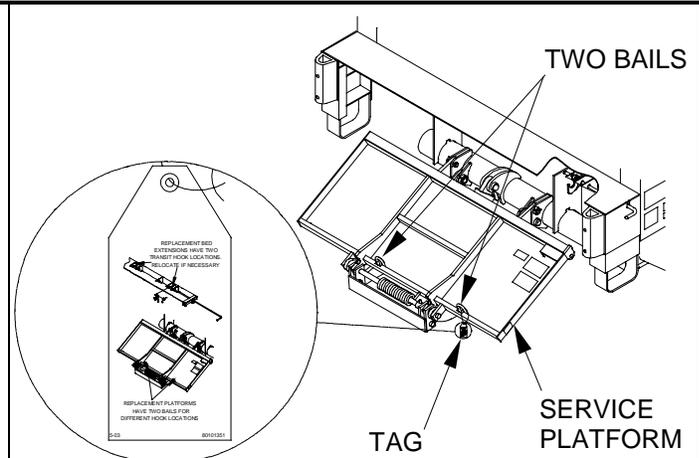

- In the past, our Flipaway liftgates have not been compatible with trucks that have walk-ramps.
- This issue was alleviated with a redesign of the E-30's Bed Extension that moved the Transit Hook and Bail on the underside of the Deck toward the curb side of the truck and out of the way of the walk-ramp
- To make more of our Flipaway liftgates walk-ramp compatible, as well as reduce inventory, the E-30 Bed Extension will now be used with all F, C, and E-series liftgates
- A chart is provided below as a part number reference regarding these changes

GR00341

SERVICED PLATFORMS

- All Current F, C, and E Platform and Bed Extension part numbers will be changed to service status. All E-25 and E-30 Platforms built after mid-July will use the service E-25 Decks as replacement Decks.
- All service Platforms will receive a second Bail to make them compatible with the old and new styles.
- Replacement Bed Extensions will have two available locations for the Transit hook.
- Replacement Platforms and Bed Extensions will have a tag explain these changes

GR00378

E-25/30 DECK CONSOLIDATION

E-25 and E-30 Main Deck Assemblies have been consolidated in the following manner...

- Wedge Main Deck Assemblies are now obsolete. Wedge Platform Assemblies will use standard Deck Assemblies with the Wedge Extension
- E-25 and E-30 now share the same Deck and Platform Assemblies

WALTCO TECH TIPS

Date: 7/22/03
No. 030138
Model: FLIPAWAY
EO No. 4917

SUBJECT: FLIPAWAY STORAGE INSTRUCTIONS

TO STORE LIFTGATE FOR TRANSIT

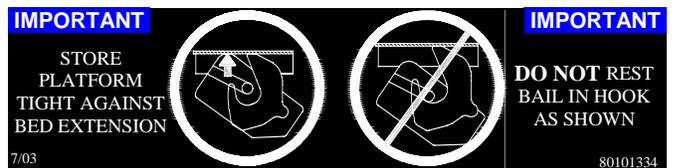

- Lower Platform to ground.
- Fold Platform.
- Raise Platform to transit position.
- Power Platform snugly to underside of Bed Extension.
- Insert a padlock into Lockout Device, if desired, to prevent unauthorized use of liftgate.

GR00180

AVAILABLE DECAL

- Decal 80101334 is available for F, C, E, and LPF Flipaway Liftgate
- The decal should be placed on the back of the Platform nearest the curb side of the truck (as shown above)

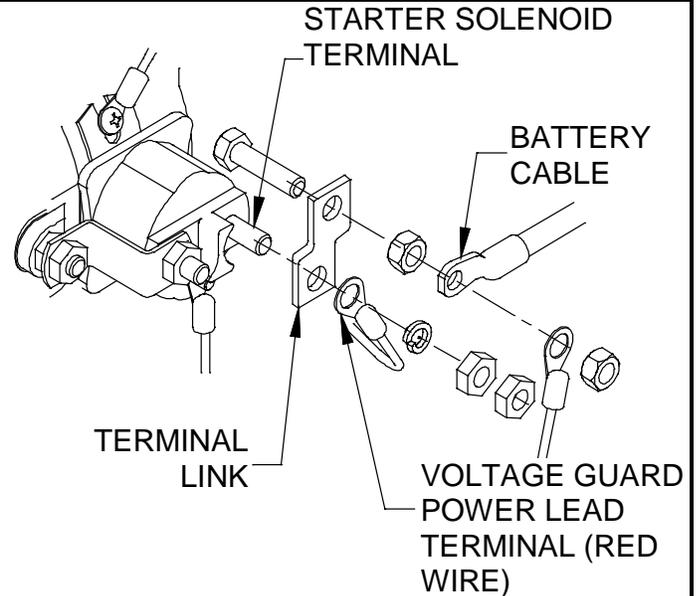

WALTCO TECH TIPS

Date: 8-22-03
No. TT030139
Model: All
EO No. NA

SUBJECT: Voltage Guard Connections

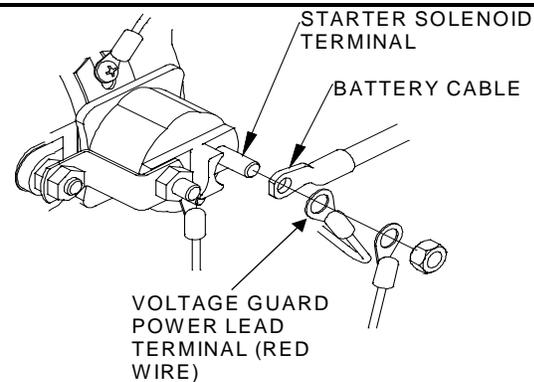

- If you encounter these symptoms in your controls: Motor won't run when Raise or Close switches are actuated, unless Voltage Guard is bypassed. No alarm from Voltage Guard. Before you assume that the Voltage Guard is defective, try this simple fix:
- WDL, RGL, OR WSL VERSION
- Disconnect Battery Cable, and swap the Power Lead to be above the Terminal Link, as shown. Replace Lock Washer and Nuts. Tighten Nut and Jam Nut to 8 foot-pounds.
- Reconnect Battery Cable, tighten to 25 foot-pounds. Use back-up wrench so that Terminal Link does not get moved.
- Retest controls. If still not working, Voltage Guard may be malfunctioning.
- How this works: When the ring terminal on the Power Lead is under the copper Terminal Link, or Battery Cable, it may shift or deform, allowing the connection to get loose. This can lead to a loss of electrical power to the Voltage Guard, which quits working. Putting the Power Lead Terminal on top of the Terminal Link or Battery Cable gives a large, flat surface, for a more secure connection.

GR00662

ALL OTHER LIFTGATES

- ✓ Disconnect Battery Cable
- ✓ Swap the Power Lead(s) to be above the Battery Cable, as shown. Replace Nut. Tighten Nut to 8 foot-pounds.
- ✓ Retest controls. If still not working, Voltage Guard may be malfunctioning.

Lubrication of Reduced Maintenance Bushings

There has been information circulating that lubricants should not be used on the reduced maintenance bushings that Waltco utilizes. This includes both Hydrocarbon lubricants (conventional petroleum based products), and less common Fluorocarbon lubricants. Lubricants can be used with our bushings but an understanding of the advantages and disadvantages is needed.

Lubrication is inherent within the bushings we use and will not dry out. The bushings are impregnated with Teflon that transfers to the pin under load. External lubricants are filled with additives that provide the lubricity. The most common filler is Molybdenum Disulfide, which is commonly referred to as “Moly”. These additives can be microscopic hard particles that roll around between the pin and our bearing liner. This can under some conditions add to premature wear as opposed to adding no grease at all. There are times when grease is the culprit instead of the cure.

Neither the Hydrocarbon nor Fluorocarbon grease material would chemically under most conditions, be a problem for our bushings since our liner is very, very resistant to about all forms of chemical degradation and attack.

Although there is a science to grease, all the analytical work and theory goes out the window when grease is used in the field. The common tendency is to use what is cheap and on hand. This is the reason Waltco reduced maintenance bushings do not have grease fittings that allow just anything to be pumped into the bushing.

The disadvantage in applying an external lubricant is that over time, contaminants could migrate into the bushing creating an abrasive paste. Without the means to purge the old grease, heavy abrasives in the old grease could increase wear in the bushing. Our bushing is designed to handle some abrasives by imbedding them into the fiber lining to keep them away from the pin, but a clean lubricant will achieve the best results.

Once a bearing is greased with a quality lubricant, it can in some cases increase the performance of the bearing up to eight times as long as it is maintained with regular intervals of grease. In other words a non-reduced maintenance application, but possible longer life. This could be helpful in northern climates where salt and other de-icing

solutions are applied to roads. These contaminants can migrate into the bushing reducing the lubrication qualities.

For higher performance, a premium grease such as SuperLube Synthetic Grease with Synolon (PTFE) from McMaster Carr as part number 1378K33, or a number of DuPont Krytox products are available.

There are two choices that would work best for those end users that have a severe application where a lubricant can increase their bushing life. They can request an SP application where we can design pins that can be drilled for grease fittings. Or they can apply an anti-seize compound such as "Molypaste" to the pins. This usually lasts for long periods of time and resists penetration of road wash. An anti-seize compound containing metal oxides should not be used as they contain abrasives that can wear away at the bushing liner.

In either case the end user should be aware of proper lubrication methods to avoid getting the opposite effect they are trying to achieve.

No. TT040002
Model: F, C, & E
EO No. EO5130

SUBJECT: New Plastic Pump Reservoir for F, C, & E Series Effective March 2004

New Reservoir

- Beginning in March 2004, the F, C, & E Series of Liftgates will come with a Plastic Pump Reservoir
- There are many advantages associated with using a Plastic Reservoir

GR00824

Impact Resistance

- The new Plastic Reservoir has been Impact tested and is as strong or stronger than the Steel Reservoir

Corrosion Resistance

- Plastic is not effected by corrosive agents such as road salt

Transparency

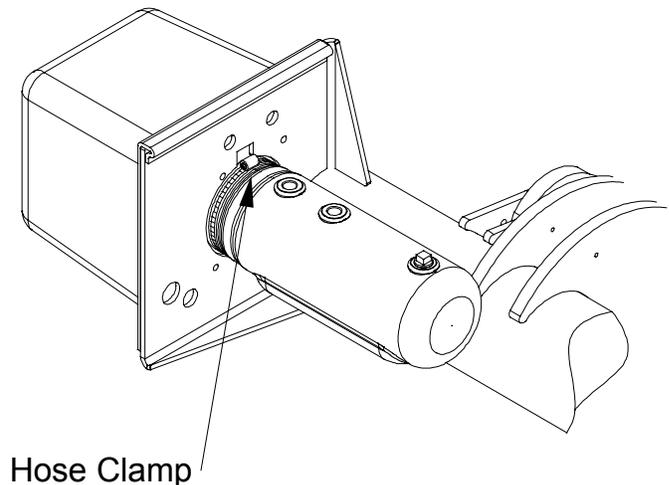

- The Reservoir is translucent, making it easy to see the fluid level in the Reservoir
- Makes checking fluid level easier than with a Sight Glass and requires no removal of Cover or Fluid Fill Cap

Replacement/Cleaning

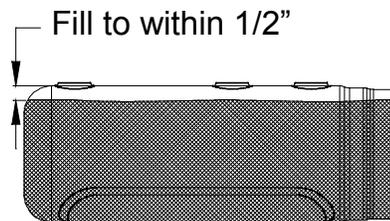

- The Reservoir is attached using a Hose Clamp
- Makes removing the Reservoir for replacement or cleaning easier

Reduced Condensation

- Plastic Reservoirs have less tendency to create condensation than steel in cold weather

Hose Clamp
